# Results for the standard questions

## Loans or credit lines to enterprises

#### **Question 1**

Over the past three months, how have your bank's credit standards<sup>1</sup> as applied to the approval of loans or credit lines to enterprises<sup>2, 3, 4</sup> changed? Please note that we are asking about the change in credit standards, rather than about their level.

	Ove	erall	mediu	small and n-sized orises <sup>5</sup>		to large prises <sup>5</sup>	Short-tei	rm Ioans <sup>6</sup>	l ong-ter	rm loans <sup>6</sup>

<sup>1)</sup> See Glossary for Credit standards

<sup>2)</sup> See Glossary for Loans.3) See Glossary for Credit line

<sup>4)</sup> See Glossary for Enterprises.5) See Glossary for Enterprise size.

<sup>6)</sup> See Glossary for Maturity.
7) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category. Notes: The net percentage is defined as the difference between the sum of the percentages for "tightened considerably" and "tightened somewhat", and the sum of the percentages for "eased somewhat" and "eased considerably". The diffusion index is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. The number of banks responding refers to all participating banks which have business in or exposure to the respective lending category.

<sup>\*</sup> Figures might not add up to 100 due to rounding

**Question 2**Over the past three months, how have the following factors affected your bank's credit standards as applied to the approval of loans or credit lines to enterprises?

(in percentages, unless otherwise stated)

<sup>1)</sup> See Glossary for Cost of funds and balance sheet constraints.

See Glossary for Cost of runds and balance sheet constraints.
 Can involve the use of credit derivatives, with the loans remaining on the bank's balance sheet.
 Involves the sale of loans from the bank's balance sheet, i.e. off-balance sheet funding.
 See Glossary for Non-banks.
 See Glossary for Perception of risk and risk tolerance.

<sup>6)</sup> Risks related to non-performing loans may be reflected not only in the "industry or firm-specific situation and outlook/borrower's creditworthiness", but also in the bank's "cost of funds and balance sheet constraints".

initial and palance sneet constraints".

7) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage (NetP) is defined as the difference between the sum of banks responding "--" (contributed considerably to tightening) and "-" (contributed somewhat to tightening), and the sum of banks responding "+" (contributed somewhat to easing) and "++" (contributed considerably to easing). "" means "contributed to basically unchanged credit standards". The diffusion index (DI) is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options.

**Question 3** Over the past three months, how have your bank's terms and conditions 1 for new loans or credit lines to enterprises changed?

<sup>1)</sup> The factors refer to the same sub-factors as in question 2. Detailed sub-factors were introduced in April 2022.

2) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage (NetP) is defined as the difference between the sum of banks responding "--" (contributed considerably to tightening) and "--" (contributed somewhat to tightening), and the sum of banks responding "+" (contributed somewhat to easing) and "++" (contributed considerably to easing). "o" means "contributed to keeping credit terms and conditions basically unchanged". The diffusion index (DI) is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options.

Over the past three months (apart from normal seasonal fluctuations), has the share of formal and informal enterprise loan applications<sup>1</sup> that were completely rejected<sup>2</sup> by your bank increased, remained unchanged or decreased (loan volume, relative to the total volume of loan applications in that loan category)?

(in percentages, unless otherwise stated)						
			Share of reject	ted applications		
	Ov	erall		and medium-sized prises	Loans to larg	e enterprises
	Jul 23	Oct 23	Jul 23	Oct 23	Jul 23	Oct 23
Decreased considerably	0	0	0	0	0	0
Decreased somewhat	1	0	1	2	1	0
Remained basically unchanged	81	91	78	83	88	92
Increased somewhat	17	8	17	11	9	7
Increased considerably	0	0	0	0	1	0
NA <sup>3</sup>	1	1	3	3	1	1

Diffusion index	8	4	8	4	5	4
Mean	3.16	3.08	3.16	3.09	3.10	3.07
Number of banks responding	149	148	144	143	145	144

See Glossary for Loan application
 See Glossary for Loan rejection.

<sup>2)</sup> See Glossary for Loan rejection.
3) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.
Notes: Additional breakdowns were introduced in April 2022. The net percentage is defined as the difference between the sum of banks responding "increased considerably" and "increased somewhat", and the sum of banks responding "decreased somewhat" and "decreased considerably". The diffusion index is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. The number of banks responding refers to all participating banks which have business in or exposure to the respective lending category.

Over the past three months (apart from normal seasonal fluctuations), how has the demand for loans or credit lines<sup>2</sup> to enterprises changed at your bank? Please refer to the financing need of enterprises independent of whether this need will result in a loan or not.

Issuance/redemption of equity

1) See Glossary for Debt refinancing/restructuring and renegotiation.
2) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.
Notes: Additional breakdowns were introduced in April 2022. The net percentage (NetP) is defined as the difference between the sum of banks responding "++" (contributed considerably to higher demand) and "+" (contributed somewhat to higher demand), and the sum of banks responding "-" (contributed somewhat to lower demand) and "--" (contributed considerably to lower demand). "" means "contributed to keeping demand basically unchanged". The diffusion index (DI) is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options.

Please indicate how you expect your bank's credit standards as applied to the approval of loans or credit lines to enterprises to change over the next three months. Please note that we are asking about the change in credit standards, rather than about their level.

<sup>1)</sup> The factors refer to the same sub-factors as in question 14.
2) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage (NetP) is defined as the difference between the sum of banks responding "--" (contributed considerably to tightening) and "--" (contributed somewhat to tightening), and the sum of banks responding "+" (contributed somewhat to easing) and "++" (contributed considerably to easing). "" means "contributed to keeping credit terms and conditions basically unchanged". The diffusion index (DI) is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options.

Over the past three months (apart from normal seasonal fluctuations), has the share of formal and informal household loan applications<sup>1</sup> that were completely rejected<sup>2</sup> by your bank increased, remained unchanged or decreased (loan volume, relative to the total volume of loan applications in that loan category)?

(in percentages	, unless	otherwise	stated

Diffusion index	5	6	6	7
Mean	3.09	3.12	3.12	3.14
Number of banks responding	139	138	146	145

<sup>1)</sup> See Glossary for Loan application.
2) See Glossary for Loan rejection.
3) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.
Notes: The net percentage is defined as the difference between the sum of banks responding "increased considerably" and "increased somewhat", and the sum of banks responding "decreased somewhat" and "decreased considerably". The diffusion index is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. The number of banks responding refers to all participating banks which have business in or exposure to the respective lending category.

Over the past three months (apart from normal seasonal fluctuations), how has the demand for loans to households changed at your bank? Please refer to the financing need of households independent of whether this need will result in a loan or not.

# Annex 2 Results for ad hoc questions

#### **Question 111**

As a result of the situation in financial markets<sup>1</sup>, has your market access changed when tapping your usual sources of wholesale and retail funding and/or has your ability to transfer risk changed over the past three months, or are you expecting this access/activity to change over the next three months?

(iii percentages, unless otherwise stated)										1									
			Ov	er the p	ast thr	ee mon	ths		Over the next three months										
		_	o	+	++	NA <sup>2</sup>	NetP	Mean	Std. dev.		_	0	+	++	NA <sup>2</sup>	NetP	Mean	Std. dev.

<sup>1)</sup> Changes in the ECB's monetary policy asset portfolio can arise as a result of net purchases or any other transactions, including reinvestments of the principal payments of maturing securities purchased, related to the following (potential) monetary policy tools: corporate sector purchase programme (CSPP); public sector purchase programme (PSPP); asset-backed securities purchase programme (ABSPP); covered bond purchase programme (CBPP); pandemic emergency purchase programme (PEPP); Outright Monetary Transactions (OMT); Transmission Protection Instrument (TPI). Direct and indirect effects of the changes in the ECB's monetary policy asset portfolio, i.e. there may be indirect effects on your bank's financial situation and asset allocation even if your bank has not been involved in any related transactions vis-à-vis the Eurosystem.

2) "NA" (not applicable) includes banks which do not have any business in or exposure to this category.

3) The net interest income is defined as the difference between the interest earned and interest paid on the outstanding amount of interest-bearing assets and liabilities by the bank.

<sup>3)</sup> The net interest income is defined as the difference between the interest earned and interest paid on the outstanding amount of interest-bearing assets and liabilities by the bank.

4) Defined in accordance with the regulatory requirements set out in the CRR/CRD IV, including both tier 1 capital and tier 2 capital.

Notes: The net percentage (NetP) is defined as the difference between the sum of the percentages of banks responding "--" (contributed/will contribute considerably to a decrease or deterioration) and "--" (contributed/will contribute somewhat to an increase or improvement) and "++" (contributed/will contribute considerably to an increase or improvement). "o" means "has had/will have basically no impact". The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. Std. dev. denotes standard deviation

<sup>1)</sup> Impact of the Eurosystem's third targeted longer-term refinancing operations (TLTRO III), for which all operations took place and which will be fully matured by December 2024. Impact of any changes in the relative funding advantage of your banks' outstanding TLTRO III funds arising from ECB key interest rate changes and/or the TLTRO III recalibration, as well as any change in your bank's overall funding conditions due to the maturity or early repayment of TLTRO III funds. Direct and indirect effects of TLTRO III, i.e. there may be indirect effects on your bank's financial situation even if your bank has not directly participated in TLTRO III.

2) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective category.

Notes: The net percentage (NetP) is defined as the difference between the sum of the percentages of banks responding "--" (has contributed considerably/will contribute considerably to a deterioration, tightening or decrease) and "--" (has contributed somewhat/will contribute somewhat to an improvement, easing or increase), and the sum of the percentages of banks responding "+-" (has contributed somewhat/will contribute somewhat to an improvement, easing or increase). "" means "has had/will have basically no impact". The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. Figures may not exactly add up due to rounding. The number of banks responding (No of banks) refers to all participating banks which have business in or exposure to the respective lending category. Std. dev. denotes standard deviation.

Over the past six months, have the ECB key interest rates decisions taken in the past and/or expected by your bank led to a change in your bank's profitability? And what will be the impact over the next six months?

<sup>(1) &</sup>quot;NA" (not applicable) does not include banks which do not have any business in or exposure to the respective category.

(2) The net interest income is defined as the difference between the interest income earned and interest expenses paid on the outstanding amount of interest-bearing assets and liabilities by the bank. Margin effects relate to changes in the interest rates of these assets and liabilities, while volume effects relate to changes in the volumes.

(3) "-" / "--" in case of higher need for provisioning and impairments; "+" / "++" in case of lower need for provisioning and impairments.
